Data Management Plan created in Data Stewardship Wizard «[ds-wizard.org](#)»

HISTORY OF CHANGES		
Version	Publication date	Changes
<i>There are no named versions</i>		

Contributors

The following contributors are related to the project of this DMP:

- **dsw參與者**

dsw@gmail.com, ORCID: [111222](#)

Roles: 其他, 聯絡人, 資料策展人, 資料管理者

Affiliation: 中研院

Projects

We will be working on the following projects and for those are the data and work described in this DMP.

dsw測試

Project Number	1231444
Start date	2026-05-21
End date	2026-05-22
Funding	National Science Foundation : 1231444 (granted)

測試模板用

Section 1: Data description and collection or re-use of existing data

1. How will new data be collected or produced and/or how will existing data be re-used?

Instrument datasets

- **DATA**

For this dataset, we are using the following instruments:

- 溫度計 – 測溫度

We will be using the following quality processes:

- calibrating measurements
- repeat samples/measurements
- standardized data capture/recording
- *Data Entry* validation
- data peer review
- controlled vocabularies
- measuring samples with known outcome (to monitor consistency)

Additional quality processes are: 無.

Re-used datasets

- **mnist**

We will re-use this standard reference data available via: 111333 in order to "測試".

We will use version "v1" of this dataset. If a new version becomes available during the project, all analyses will be redone with the new version.

This standard reference data will be available for long-term by the provider as well as we will keep the copy of this dataset and make it available with our results.

This standard reference data are available with restrictions, that will be specified.

The standard reference data are in the format that has to be transformed before using.

- **非參考資料集mnist**

We will re-use this non-referece data available via: 13123 in order to "沒有目的".

We will use the complete data set.

This data may change in the future, which might influence reproducibility of our results.

This data are available with following restrictions: "無".

This data include personal data, legally based on consent given by the research subject for processing the data under GDPR, which does not cover our reuse; therefore, new consent will be needed.

An extension of existing ethical approval under research ethics laws of this non-reference data will be needed.

We need to harmonize different sources of existing data before reusing them but we won't make this harmonization results available to others.

We will need to (re-)make the data into computer readable form before their using and we will make this computer readable form available to others. We will provide machine readable, standardized metadata to others and we will use following Metadata Standards: no.

Provenance

We will use other solution than (electronic) lab notebooks to make sure that there is good provenance of the data analysis: NO.

2. What data (kind, format, volume) will be collected or produced?

Instrument datasets

The following instrument datasets will be acquired in the project:

- **DATA**

This dataset will be collected by an external party. For the ownership of the data we have made the following arrangements: NO.

The equipment is less well described or not completely standard, so we will need to take extra care documenting the process.

Non-equipment datasets

We collect data from questionnaires and case report forms. The non-equipment datasets are:

- **資料集A** – 沒有敘述

Re-used datasets

Datasets considered for reuse and actually reused are described in Question 1.

Data formats and types

We will be using the following data formats and types:

- csv

We are not using a standardized format, because: 無. This is not a suitable format for long-term archiving; however, we plan to convert it to a suitable format before the end of the project. We expect to have -1 GB of data in this format.

Section 2: Documentation and data quality

3. What metadata and documentation (for example the methodology of data collection and way of organizing data) will accompany the data?

List of data to be published is given in Section 5, Question 10 and 11. This also includes information about catalogs where the data can be found. Information about data types used is given in Section 1, Question 2.

We will be documenting the data with DDI (Data Documentation Initiative) metadata standard. We will include keywords and relevant ontology references to optimize the possibility for discovery and potential reuse. The provenance will be captured using W3C PROV.

Metadata will not be available openly – 機密.

Data storage and file conventions

We estimate the storage space that the project will require for all data and software (including temporary storage) to 2 gigabytes.

We will use a filesystem with files and folders with the following folder conventions:

- There will be a **folder for each sample/subject**. Each of those will use the following conventions: 隨意命名.
- There will be a **(sub)folder for each (repeated) analysis**. Each of those will use the following conventions: 隨意命名.
- There will be a **(sub)folder for each step in the analysis workflow**. Each of those will use the following conventions: 隨意命名.

Moreover, we have made appointments about naming the files.

We will be storing data in an "object/document store" system using following naming conventions for objects in the store: 隨意命名.

We will use a database system to store project data. Data in the database will be read-only.

4. What data quality control measures will be used?

• DATA

We will be using the following quality processes for this dataset:

- calibrating measurements
- repeat samples/measurements
- standardized data capture/recording
- *Data Entry* validation
- data peer review
- controlled vocabularies
- measuring samples with known outcome (to monitor consistency)

Additional quality processes are: 無.

Section 3: Storage and backup during research process

5. How will data and metadata be stored and backed up during the research?

There is no shared workspace used during the project for working with data.

Data that project members themselves store are adequately backed up and traceable. Therefore data are protected against both equipment failure and human error.

6. How will data security and protection of sensitive data be taken care of during the research?

Project members can carry data with them on password-protected laptops. All data centers where project data is stored hold appropriate certifications.

The risk of information loss, and leak is acceptably low. We will mitigate the risk of information vandalism.

All personal information will be processed in pseudonymized form only. We have a specific way of pseudonymization: 認真做.

We will be archiving data for long-term preservation already during our project.

Policies and Procedures

We will use following policies and procedures:

- 民法 – <https://ref.com>
略

Section 4: Legal and ethical requirements, codes of conduct

7. If personal data are processed, how will compliance with legislation on personal data and on security be ensured?

Data security protection is described in Section 3, Question 6.

Legal basis for collecting and processing personal data

We are collecting and processing personal data based on subject's consent.

Technical and procedural measures

The stored data are identifiable.

We will use the following technical and procedural safeguards : 沒有.

Access procedure to personal data

There is a procedure for users to access private data as follows: 程序3

8. How will other legal issues, such as intellectual property rights and ownership, be managed? What legislation is applicable?

We will be working with the philosophy *as open as possible* for our data.

The data cannot become completely open because of:

- legal reasons
- non-patent business reasons: 沒有資料
- we have other than paper-publishing reasons: 沒有資料

Authentication and Authorization of Users

We will make use of an existing data committee - 那個的資料取用委員會.

Data that is not legally restrained will be released after a fixed time period (永久封存), unconditionally.

We have made the following arrangements regarding the data ownership: 沒有安排.

For the reference and non-reference data sets that we reuse, conditions are as follows:

- mnist
It is available under specific restrictions, which we will follow in our project: 沒有.
- 非參考資料集mnist
It is available under specific restrictions, which we will follow in our project.

9. What ethical issues and codes of conduct are there, and how will they be taken into account?

Ethical approvals

The following project require ethical approval:

- **dsw測試**
 - case number: 223213, status: *planned*

Data we produce

For the data we produce, the ethical aspects are as follows:

- **DEPOSITAR資料集**
 - It contains personal data.

- It contains sensitive data.

Data we collect

We will collect data related to individuals, i.e. "personal data". We explored General Data Protection Regulation (GDPR) considerations and relevant materials. We ask the data subjects for their consent. We ask for consent for anonymization; We will anonymize first and all further processing is on the anonymous data. The data subjects will be informed as follows: 用摩司密碼. The consent form will be available for re-users. The procedure for obtaining consent from data subjects is set as follows: 寄信. The purpose of processing the personal data can be described as follows: 沒有目的. We need to conduct a data protection impact assessment (DPIA).

The data collection is subject to ethical legislation. It is covered by ethical review. It does not involve human subjects.

Section 5: Data sharing and long-term preservation

10. How and when will data be shared? Are there possible restrictions to data sharing or embargo reasons?

How the data will be shared

- **DEPOSITAR資料集** (will be published)
The dataset has the following identifiers:
 - type2: **3231**

The distributions will be available as follows:

- Closed (not meant for sharing) using a general-purpose repository: 一個資料儲存庫. The distribution will be available under the following license:
 - Starting 2026-05-30: Available under some restrictions, which we will follow in our project: 沒有條件. Re-users will be able to get access through a specialized process: 程序a. The conditions will be published as part of open metadata. More information about the restrictions can be found here: <https://license.com>.

The dataset will published as soon as possible after collecting it.

The following qualified references to other data sets will be included:

- 123132 – 沒有關係

Restrictions on data sharing

Ethical and legal restrictions are documented under Section 4. We have used the Data Stewardship Wizard, which made us aware of options to minimize the restrictions.

Data cannot be completely open due to legal reasons. But data that is not legally restrained will be released after a fixed time period. The embargo period will be 永久封存.

A data sharing agreement will be required. People can apply to the 那個的資料取用委員會 data access committee.

We are running the project in a collaboration between different groups and institutes. A collaboration agreement that describes who can have access to what data in the project is set.

11. How will data for preservation be selected, and where data will be preserved long-term (for example a data repository or archive)?

We plan to produce the following datasets:

- **DEPOSITAR資料集** (will be published)

This data set will be kept available for a fixed period (prepaid) of: 1 month.

The metadata will be available even when the data no longer exists.

The distributions will be stored in:

- *General-purpose repository*: 一個資料儲存庫.

We will carry the costs related to the used repositories by: 面交.

12. What methods or software tools are needed to access and use data?

- **DEPOSITAR資料集**

In order to use this dataset following software will be needed:

windows, available at www.windows.com.

13. How will the application of a unique and persistent identifier (such as a Digital Object Identifier (DOI)) to each data set be ensured?

Ensuring PIDs for published data

- **DEPOSITAR資料集**

This data will be distributed in following repository:

- **General-purpose repository**

Within this repository, unique and persistent identifiers will be applied as follows:

A project data steward or principle investigator will assign the persistent identifier.

The repository will make sure the persistent identifier can be resolved to a digital object.

Within this repository, unique and persistent identifiers will not be applied.

Possible re-use of created data in other contexts

Explanation of how the collected or created data might be re-used in other contexts:

- **DATA**

Researchers working in other fields will be interested in re-using this data because: 下載使用.

Section 6: Data management responsibilities and resources

14. Who (for example role, position, and institution) will be responsible for data management (i.e. the data steward)?

dsw參與者 is responsible for reviewing, enhancing, cleaning, or standardizing metadata and the associated data submitted for storage, use and maintenance within a data centre or repository.

dsw參與者 is responsible for maintaining the finished resource.

15. What resources (for example financial and time) will be dedicated to data management and ensuring that data will be FAIR (Findable, Accessible, Interoperable, Re-usable)?

To execute the DMP, additional specialist expertise is required. We will be training existing staff on: 實習.

We require the following hardware or software in addition to what is usually available in the institute: 網路線，為了架網站.

Charges applied by data repositories (if any) are mentioned already in Section 4, Question 11.

Following resources will be dedicated to data management and ensuring that data will be FAIR:

- **dsw測試 - 1231444**

- **補助** - 補助說明.

The amount is 0 USD (US Dollar).

This resource is allocated for ensuring findability, ensuring accessibility, ensuring interoperability, ensuring reusability, and supporting management of data.

This cost will be covered by funding grant (grant number: 3333)
